

Newsletter July 1

Hi Viewers,

I would love to talk about Dulux Acra Tex Acra Shield in the newsletter.

This product is renowned for exterior painting, where it has unique attributes such as very well built, pigmented waterbased paint and 100% acrylic which is known as painter's friend.

Oasis Painting equips the product mainly for 5 reasons.

- 1** Due to the water based attribute of the product, it enhances the quality and wellbeing of the client, by emitting less fumes compared to oil based paints. Painters prefer this product because it is economical to clean up and safer in regard to occupational health and safety.
- 2** We would advise our clients to apply this paint as it protects the building from chemical attacks and it resists from Pollution. Moreover it significantly improves the washability and reduced the dirt accumulation which enables the client to spend less on maintenance.
- 3** Another triggering factor is it increases the flexibility, which results in far more better than the normal paints in terms of crack bridging. The average turnover would be 5 times than the normal paints.
- 4** This product has longterm exterior durability and therefore reduces the hassle to the client with regards to longevity of the product.
- 5** Clients, who reside close to beach will be benefitted due to the salt resistant of the product and also the character of Matt would reduce the imperfections to the surface compared to other varieties, which portrays a pleasant atmosphere and charming outer look to others.

Another classic advantage of the product is it withstands up to 90c temperature and gives enormous protection to the exterior building. We painters and clients rely on this product highly as it has sophisticated features which cannot be seen in other products.

The success of the work depends on the preparation. Even though the product has numerous qualities the success again relies on the preparation done by the painters before commencing the work. By having proper and structured preparation would benefit the client to utilise the benefits to the utmost maximum. Here are a few tips on the preparation for this type of product. These are unique and applicable for only this product.

Painters have to ensure that they apply the Acra Prime to have the effective paint system of the product and make sure it will not rain for first 24 hours after applying the Acra Shield.

The application should be made with in 10 -30c of air temperature and avoid applying on full sun, hot or windy conditions.

In terms of precautionary do not thinner this product as this affects the flexibility and durability of it.

This product is designed for the enhancement of perfect finish and long lasting. This product is also known as Painters friend.

See you with more information in my next newsletter.
